MEMORANDUM

SUBJECT: Final Report, Revision 2, Walter Energy, Inc. (a.k.a. Sloss Industries and Walter Coke)
Birmingham, Alabama 35207
SESD Project #10-0656

FROM: Kevin Simmons, Life Scientist *KS*
Enforcement Section

THRU: Laura Ackerman, Chief *LCS*
Enforcement Section

TO: James H Smith, PG
RCRA Division

Attached is the final report for the Walter Energy, Inc. sampling investigation conducted September 22-24, 2010 in Birmingham Alabama. This report supersedes the draft report, Revision 1, issued on February 10, 2011. Please send questions or comments to Kevin Simmons at simmons.kevin@epa.gov or 706.355.8730.

Report Revision

The following changes were made:

- Added sentence to the end of first paragraph in **Background**, page 4.
- One-half of the MRL was used in the BaP TEQ calculation instead of one-half of the minimum detection limit (MDL), page 10.
- Table 3 was replaced with the re-calculated BaP TEQs, pages 11-13.
- Updated RSL Table reference from December 2009 to November 2010.
- Clarified highlights used in Tables 6 and 7, page 18.
- Removed last sentence in first paragraph in **Background** section, page 4.

Introduction

During the week of September 22, 2010 representatives of the US EPA Region 4 Science and Ecosystem Support Division (SESD) and US EPA RCRA Division, conducted a sampling investigation in and around the Robinwood Neighborhood in relation to the Walter Energy facility in Birmingham, Alabama. The investigation was requested by the Region 4 RCRA Division, Corrective Action Section. The following personnel participated in the investigation:

<u>NAME</u>	<u>ORGANIZATION</u>	<u>DUTIES</u>
Karen Knight	US EPA RCRA	Chief, Corrective Action Section
Jim Smith	US EPA RCRA	Corrective Action Specialist, (PM)
Meredith Anderson	US EPA RCRA	Engineer
Kevin Simmons	US EPA SESD	Project Leader

Background

The Walter Energy Inc. facility is located at 3500 35th Ave. N., Birmingham, Alabama. Walter Energy is a manufacturer of coke from coal obtained from mines in the Birmingham area and the Black Warrior Basin in west Alabama, and the central Appalachians. Based on USGS data, these coals have arsenic levels as high as 1500 mg/kg. Onsite soils have arsenic as high as 220 mg/kg. Coke production also releases volatile metal compounds into the atmosphere.

Polycyclic Aromatic Hydrocarbons (PAHs) are derived from coal as a raw material from coal piles and from roads onsite, stack emissions, coke oven emissions, etc. The PAHs are distributed across the site and offsite as blown particulates and as soot.

The Birmingham area has been heavily industrialized for many decades which has contributed to the overall anthropogenic contamination of the nearby neighborhoods.

The Harriman Park, Collegeville and Fairmont neighborhoods are of particular concern due to their proximity to Walter Coke. Arsenic and Polycyclic Aromatic Hydrocarbons (PAHs) have been detected in the soil in these neighborhoods. It is Walter Coke's position that the PAHs and arsenic detected in these neighborhoods are the result of years of contribution from multiple sources, both non-industrial and industrial since arsenic is also naturally occurring in the rock and soil.

The goal of this study is to provide additional data to aid in determining a "background" concentration for arsenic and benzo[a]pyrene toxic equivalent (BaP TEQ) in soils in the vicinity of the facility.

Soil Sample Selection Sites and Site Geology

The purpose of the study is to assess the soil in residential neighborhoods that are similar to those adjacent to Walter Energy's Coke Plant but outside the influence of coke production. The Robinwood Community is very similar in home construction and age. Residents report burning coal for home heating and coal storage. This would provide an anthropogenic source for PAHs and arsenic. Homes with asphalt shingles, asphalt roads, and burn pits or burn barrels offer other sources for PAHs. Burn Pits were more numerous in the Robinwood Area than in the communities surrounding Walter Energy. There were also abundant bar-b-que grills and pits. A rail road line also passes through the community and may provide PAHs and arsenic contamination from coal cars or historically from locomotives.

The geology of the Walter Energy is complex with different rock types exposed as a result of faulting in the Opossum Valley Fault Zone. The fault zone strikes from southwest to northeast. The foot wall of the fault lies to the west under Sand Mountain. The rocks squeezed between two faults in the fault zone are Pennsylvanian age sandstone of the Pottsville Formation; Mississippian age rocks of shale, chert, limestone and sandstones (Fort Payne Formation, Tuscumbia Limestone, and Hartselle Sandstone, Floyd Shale); and Silurian age red beds (Red Mountain Formation) in the northwest corner of the facility at SWMU #22 Polishing Pond. The majority of the site overlies Cambrian age rocks of the Conasauga limestone on the hang wall side of the fault east of the Polishing Pond. This includes a portion of the BTF Area, Land Disposal SWMUs, Coke Operations, Former Chemical plant operations and Raw Material Coal Pile. The residential communities of Harriman Park and Collegeville overlie the Conasauga Formation while the Fairmont Community overlies the Conasauga west of Riggins School until contact with the Opossum Valley Fault. The community overlies Cambrian/Ordovician Knox Formation and Red Mountain Formation (Geologic Map of Birmingham North 7.5 minute Quadrangle, Jefferson County, Alabama, 2006).

The geology of the Robinwood Area is similar to that of the Walter Energy site. The Conasauga Formation is present under half of the Robinwood community west of HWY 75 and is in contact with the Ketona Dolomite extending to the east. The Ketona Dolomite is in contact with Chepultepec and Copper Ridge Dolomite on the east side of HWY 79. Soil samples taken in soils overlying these formations may provide accurate information for inorganic arsenic under naturally occurring conditions (Figures 1 and 2). Source maps for Figures 1 and 2 are the Geology Map of Irondale 7.5 Minute Quadrangle, Jefferson County, Alabama, 2008. Geology Map of Pinson 7.5 Minute Quadrangle. Geologic Map of Birmingham North 7.5 Minute Quadrangle, Jefferson County, Alabama, 2006. Geologic Map of Gardendale 7.7 Minute Quadrangle, Jefferson County, Alabama.

In the Robinwood Community, 11 surficial soil samples were taken in soils overlying the Conasauga (au) Formation, eight surficial soil samples were taken in soils overlying the Ketona Dolomite and two samples were taken in soils overlying the Chepultepec and Copper Ridge Dolomites.

Summary

Twenty (20) sample locations were selected and sampled in and around the Robinwood area ranging from 4.5 to 9 miles northeast of Walter Coke. Samples were labeled WC01-WC21 with a SF (surface soil) or SB (subsurface soil) suffix designation. Sample WC-08 was not collected due to a large amount of coal fragments in the soil throughout the yard. The residents indicated that coal was stored in a significant portion of the yard in years past. This area was chosen based on minimal heavy industry for the location, a residential population and geology similar to the Walter Coke site.

Each sample station consisted of a surface soil sample comprised of a 3 to 5 point aliquot from 0"- 6". A subsurface grab sample from approximately 24" – 36" below ground surface was collected at eight (8) of the stations. The subsurface sample locations were determined in the field based on the ability to auger from 24"-36" and to distribute the subsurface samples collected throughout the sample area. The subsurface samples consisted of a one point grab sample collected from one of the aliquots where the 24" to 36" depth could be obtained.

Arsenic and PAH analysis was performed on each surface soil sample and arsenic only on the subsurface samples. Additionally, the surface soil samples were analyzed for arsenic both sieved and un-sieved and the subsurface soil samples were analyzed un-sieved only. The samples were sieved by the SESD laboratory using a #60 (250 micron) sieve prior to analysis. The PAH samples were analyzed un-sieved. **Figures 1 and 2** show the sample locations and associated geology.

Discussion of Site Activities

EPA personnel conducted sampling on September 22-24, 2010. Property access authorizations were obtained for each property sampled. Numerous properties were owned by Billie McAndrews, who granted permission to sample several of them. An explanation was given to the tenant or resident of each home, if present, before sampling the property. Each sample location is described below and **Table 1** lists the sample locations and potential PAH sources observed in the field. The GPS coordinates were downloaded from a Garmin GPS 76 CSx and are displayed to eight decimal places. The coordinates recorded in the logbook are shown to five decimal places because the GPS unit displays only five decimal places.

Table 1: Sample Locations

Sample ID	Location	Potential PAH Sources	Latitude	Longitude

WC21	115 4th St	Chimney	33.61145787	-86.75031544

WC01-SF was a 5-point composite collected at the Rusk Trailer Park in the clothes hanging area near the center of the park. The trailer park owner indicated that the area sampled had remained the same since about 1950. The area consisted of light brown loam soil with small rock fragments. Sample **WC01-SB** was collected from 2'-3' at the center aliquot and was a silty, clayey soil.

WC02-SF was a 4-point composite collected at the home of Dr. Ruth Strong. Two sample points were taken from the front yard and two from the back. Soil was a light to medium brown, loam with chert fragments scattered throughout the yard. A subsurface sample was attempted, but could only auger to approximately one foot.

WC03-SF was a 4-point composite collected at the Robinwood Grocery Store. The surface soil aliquots contained chert, bits of glass, concrete, asphalt and other debris which indicated possible fill dirt. The soil was dark gray to sandy brown with chert fragments. **WC03-SB** was collected at approximately 19" due to refusal and was a gray, brown loam with chert fragments and other pieces of debris.

WC04-SF was a 5-point composite collected from a lot with a vacant house and overgrown with vegetation. Soil was a rich, dark brown loam with little to no rocks or debris. The lot had evidence of a burn pit and bordered the railroad track. **WC04-SB** was collected from the 2'-3' depth, approximately 60' from the railroad track with a reddish-brown loam soil transitioning to an orange-brown clayey soil from 2'-3'.

WC05-SF was a 5-point composite with medium brown soil with rounded pebble quartz and a few fragments of coal and refractory glass.

WC06-SF was a 5-point composite with light to medium brown to orange-brown soil with little to no rock fragments. Property was bordered on the east by the railroad track and on the west by a business which used heavy equipment. **WC06-SB** was collected from 2'-3' and consisted of a light brown soil grading to plastic, orange clay from 0.5'-2'.

WC07-SF consisted of a 5-point composite across three small lots, each with a house. Soil was light brown with some chert fragments. **WC07-SB** was collected from 2'-3' and consisted of dry, friable, orange clay with small rock fragments, some chert and possible small (approximately one-eighth inch diameter) round iron oxide pellets.

WC08-SF was a 5-point composite which contained coal fragments and was deemed not suitable for a background sample. This sample was rejected and not submitted for analysis.

WC09-SF was a 5-point composite of light to medium-brown soil with fragments of dolomite. Property lies between Hwy 79 and 6th Avenue.

WC10-SF was a 5-point composite from a lot that previously had a trash burning area, numerous gasoline powered mowers and previously had a garden along the back fence. The soil was light to medium-brown with some chert and slag fragments.

WC11-SF was a 5-point composite consisting of light to medium brown soil. A pump station was located on the northeast corner of the property.

WC12-SF was a 5-point composite collected in a lot with dolomitic rock containing limestone intraclasts and a rock outcrop of white calcite. The soil was a light to medium brown soil with chert and a few, small coal fragments.

WC13-SF consisted of a 5-point composite of light brown to medium brown soil with some glass and porcelain fragments. Attempted a subsurface soil sample, but soil was too hard to auger beyond 1.5 feet.

WC14-SF was a 5-point composite collected at the Jefferson State Community College Park next to Hwy 79. The aliquots contained mainly an orange-brown fine soil with some chert fragments. The area consisted of mainly large pines, 2 to 3 feet in diameter. Several charcoal grills were located throughout the park at the picnic tables. **WC14-SB** was collected from 2'-3' and was an orange-brown soil with chert fragments.

WC15-SF was a 5-point composite consisting of light brown soil with limestone rock fragments.

WC16-SF was a 4-point composite of medium brown soil with rock fragments. A fifth aliquot was not collected due to many potential anthropogenic influences such as abandoned cars.

WC17-SF was a 5-point composite of reddish brown clay soil with some glass fragments. **WC17-SB** was collected from 2'-3' and consisted of reddish orange clay with iron or manganese nodules.

WC18-SF consisted of a 5-point composite of light to medium brown and reddish brown soil with rock fragments and one piece of plastic jewelry. The area had two obvious burn areas, one of which was in use.

WC19-SF was a 5-point composite consisting of light tan and light gray soil with some white glass fragments. A duplicate sample, **WC19-SFD**, was collected by moving one foot north of each previous aliquot and collecting the five aliquots again. **WC19-SB** was collected from 2'-3' and was yellowish brown dry, brittle clay with rock fragments.

WC20-SF was a 5-point composite of orange brown soil and clumpy brown soil. The 35 year resident informed us that the property had been filled in with foundry dirt many years ago.

WC21-SF was a 5-point composite consisting of orange clay, light brown, tan and darker brown soils with rock fragments. A rock outcrop on the property had a fine sugary texture to it.

Investigation Results

The highest BaP TEQ was at Station WC03, the Robinwood Store at 1144.57 ug/kg. Five stations (WC02, WC06, WVC07, WC11, and WC14) had TEQs less than 5 ug/kg. Four of those stations (WC02, WC07, WC11, and WC14) had no PAH analyte result over the minimum reporting limit (MRL).

In *Provisional Guidance for Quantitative Risk Assessment of Polycyclic Aromatic Hydrocarbons* (EPA/600/R-93/089, July 1993) and regional guidance, EPA recommends that a toxicity equivalency factor (TEF) be used to convert concentrations of carcinogenic polycyclic aromatic hydrocarbons (cPAHs) to an equivalent concentration of benzo(a)pyrene when assessing the risks posed by these substances. These TEFs are based on the potency of each compound relative to that of benzo(a)pyrene.

Table 2 lists the TEFs for carcinogenic PAHs used in calculating the BaP TEQ for each sample.

Table 2: TEFs for PAHs

Compound	TEF
Benzo(a)pyrene	1.0
Benz(a)anthracene	0.1
Benzo(b)fluoranthene	0.1
Benzo(k)fluoranthene	0.01
Chrysene	0.001
Dibenz(a,h)anthracene	1.0
Indeno(1,2,3-c,d)pyrene	0.1

Provisional Guidance for Quantitative Risk Assessment of Polycyclic Aromatic Hydrocarbons (EPA/600/R-93/089, July 1993)

Table 3 lists the PAH results and calculated BaP TEQs for each surface soil sample. For analytes with a result less than the MRL, one-half of the MRL was used in the BaP TEQ calculation. The MRLs were obtained from the SESD laboratory and are highlighted in blue and the laboratory results are yellow.

Table 3: PAH Results/BaP TEQs for Surface Soil Samples

	Sample Time	11:30	12:50	13:15	14:20	14:55
Analyte	Units					
2-Methylnaphthalene	ug/kg dry	< 36 U	< 37 U	< 37 U	< 36 U	< 36 U
Acenaphthene	ug/kg dry	< 36 U	40	< 37 U	< 36 U	< 36 U
Acenaphthylene	ug/kg dry	< 36 U	< 37 U	< 37 U	< 36 U	< 36 U
Anthracene	ug/kg dry	< 36 U	100	< 37 U	< 36 U	< 36 U
Benzo(a)anthracene*	ug/kg dry	62	240	51	18	53
Benzo(a)pyrene*	ug/kg dry	110	160	47	18	56
Benzo(b)fluoranthene*	ug/kg dry	160	190	61	42	80
Benzo(g,h,i)perylene	ug/kg dry	100	85	< 37 U	< 36 U	44
Benzo(k)fluoranthene*	ug/kg dry	98	150	42	18	63
Chrysene*	ug/kg dry	110	250	72	57	92
Dibenzo(a,h)anthracene*	ug/kg dry	52	53	18.5	18	18
Fluoranthene	ug/kg dry	66	590	97	66	150
Fluorene	ug/kg dry	< 36 U	51	< 37 U	< 36 U	< 36 U
Indeno (1,2,3-cd) pyrene*	ug/kg dry	100	87	18.5	18	39
Naphthalene	ug/kg dry	< 36 U	< 37 U	< 37 U	< 36 U	< 36 U
Phenanthrene	ug/kg dry	< 36 U	350	55	< 36 U	83
Pyrene	ug/kg dry	74	420 J,O	74	57	120
BaP TEQ (Calculated)	ug/kg	195.29	266.45	79.042	44.037	91.922

* Used to calculate BaP TEQs

Table 4 contains the non-detect PAHs below the MRL and **Table 5** contains the results above the MRL for all surface soil samples with comparison to the *Regional Screening Levels for Chemical Contaminants in Residential Soil at Superfund Sites November 2010* (RSL RES SOIL) and the *Residential Risk-based Screening Levels for Chemical Contaminants in Soil at Superfund Sites November 2010* (RSL RISK SSL).

Stations WC02, WC07, WC11, and WC14 are shown in **Table 4** because no PAH analyte was detected above the MRL. In **Table 5**, PAH analytes with results that exceed either screening level are highlighted in yellow. Results that exceed either or both screening levels are in bold type.

Table 6 contains the total metals results from the surface soil samples with comparison to the *Regional Screening Levels for Chemical Contaminants in Residential Soil at Superfund Sites November 2010* (RSL RES SOIL) and the *Residential Risk-based Screening Levels for Chemical Contaminants in Soil at Superfund Sites November 2010* (RSL RISK SSL).

All of the surface soil samples were analyzed both sieved and un-sieved. Columns shaded gray are the results obtained after sieving the soil through a #60 or 250 micron sieve. Only arsenic results are **bolded** and highlighted in yellow. Other metals in yellow indicate an analytical result equal to or greater than the highlighted RSL.

Table 7 contains the total metals results of the eight subsurface soil samples compared to the same screening values as Table 5. The subsurface samples were analyzed un-sieved. Only arsenic results are **bolded** and highlighted in yellow. Other metals in yellow indicate an analytical result equal to or greater than the highlighted RSL.

Quality Assurance/Quality Control

Only one duplicate sample was collected during the project. **Table 8** shows the PAH results for Station WC19-SF. The results in bold type exceed one or both screening levels listed in Table 4. The lack of agreement between samples may be due to inherent soil variability in the neighborhood for PAHs.

All sample material was placed in a glass pan and homogenized prior to being divided into separate containers for PAH and metals analysis. Based on the metals results, Table 9, the material was thoroughly homogenized.

Table 8: Duplicate Sample PAH Results

	Station ID Sample ID Date Time	WC19 WC19-SF 09/24/2010 12:50	WC19 WC19-SFD 09/24/2010 13:15
Analyte	Units		
2-Methylnaphthalene	ug/kg dry	-	-
Acenaphthene	ug/kg dry	40	-
Anthracene	ug/kg dry	100	-
Benzo(a)anthracene	ug/kg dry	240	51
Benzo(a)pyrene	ug/kg dry	160	47
Benzo(b)fluoranthene	ug/kg dry	190	61
Benzo(g,h,i)perylene	ug/kg dry	85	-
Benzo(k)fluoranthene	ug/kg dry	150	42
Chrysene	ug/kg dry	250	72
Dibenzo(a,h)anthracene	ug/kg dry	53	-
Fluoranthene	ug/kg dry	590	97
Fluorene	ug/kg dry	51	-
Indeno (1,2,3-cd) pyrene	ug/kg dry	87	-
Naphthalene	ug/kg dry	-	-
Phenanthrene	ug/kg dry	350	55
Pyrene	ug/kg dry	420 J,O	74

Table 9 shows the total metals results for Station WC19-SF. The results in bold type exceed one or both screening levels listed in Table 5. The metals results show good agreement between the original sample and the duplicate despite being sampled at the same time and with the same debris problems as the PAHs.

Temperature blanks were placed in the coolers with the samples and delivered to the SEDS laboratory.

Methodology

Field activities were conducted in accordance with SEDS's Field Branches Management and Quality System Procedures and the following SEDS field measurement and sampling operating procedures:

SESDPROC-110-R2, Global Positioning System

SESDPROC-205-R1, Field Equipment Cleaning and Decontamination

SESDPROC-209-R1, Packaging, Marking, Labeling and Shipping of Environmental and Waste Samples

SESDPROC-300-R1, Soil Sampling

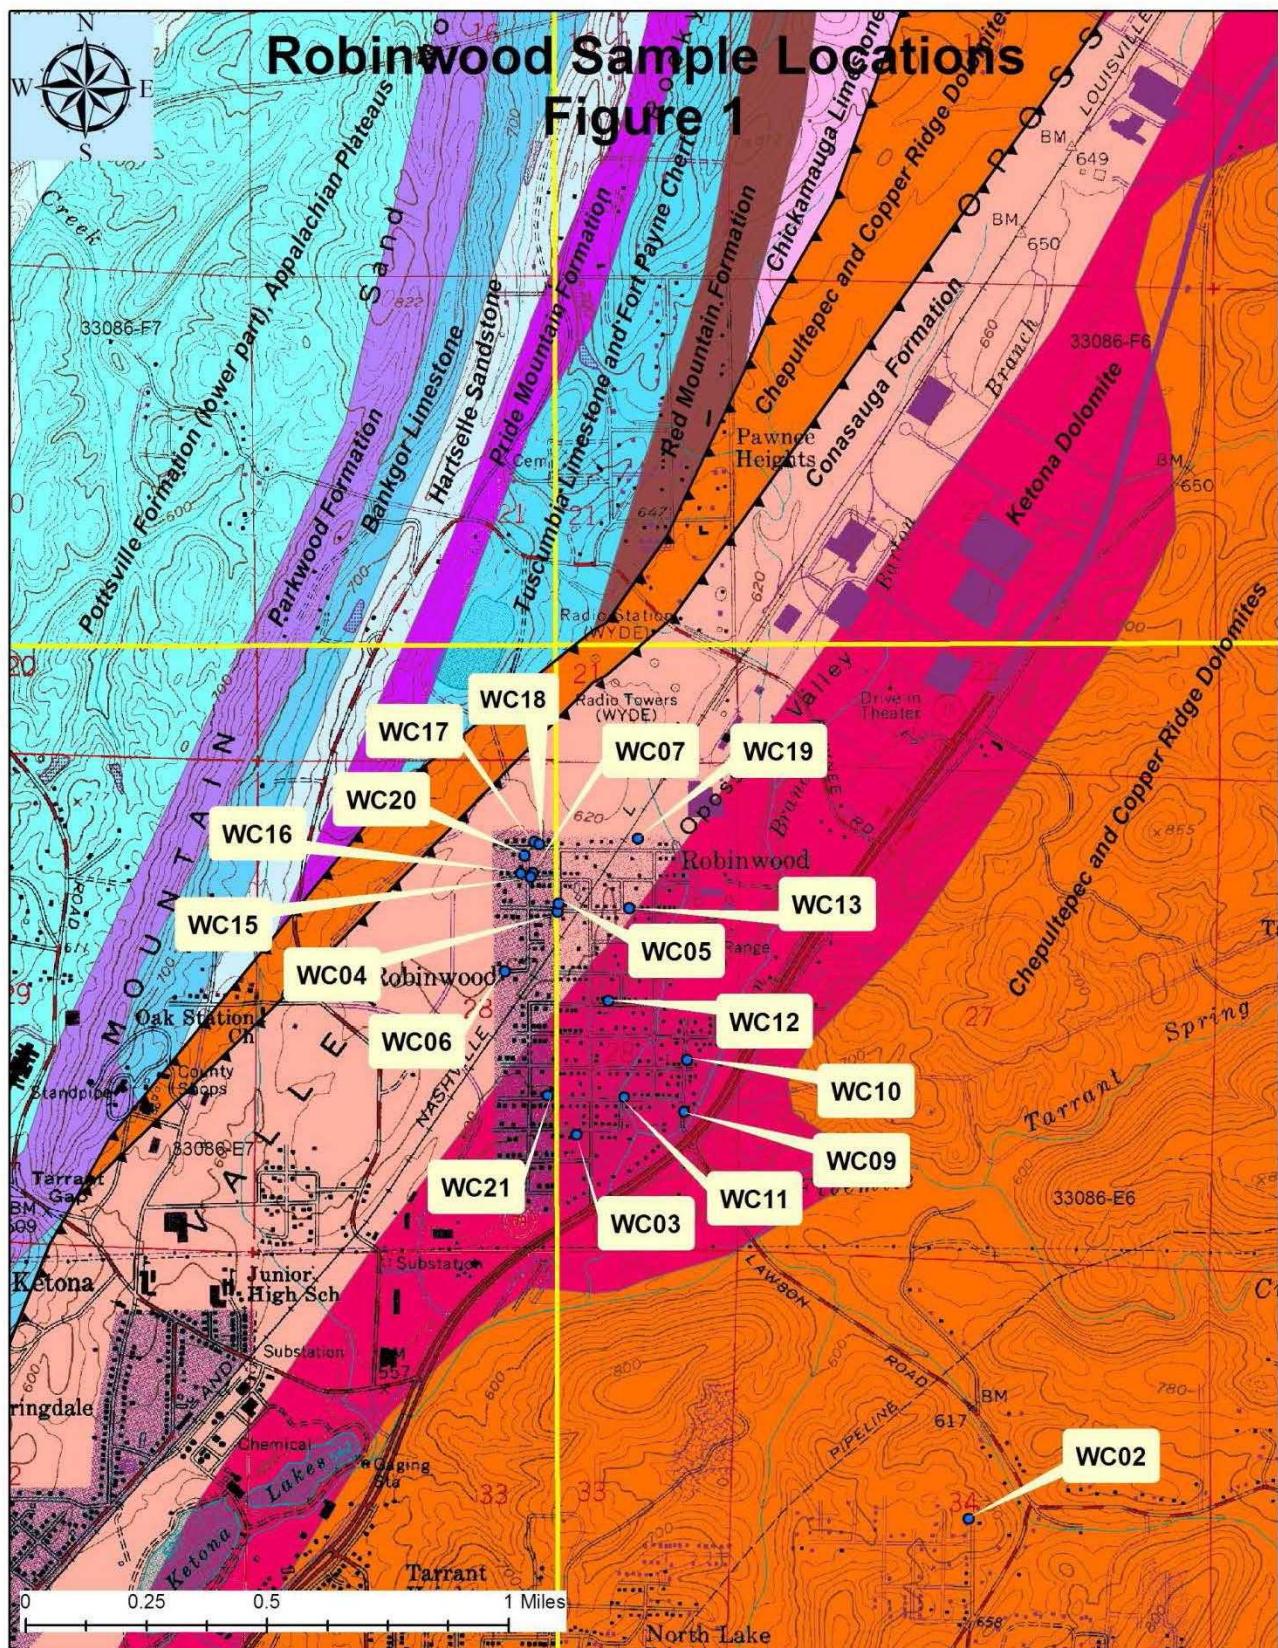

All field measurement and sampling procedures were performed by the SESD Enforcement and Investigations Branch personnel. Chain of custody documents were prepared and signed by Kevin Simmons. The **Soil Sample Selection Sites and Site Geology** section, page 5, was written by Jim Smith. The detailed soil sample descriptions were taken from Mr. Smith's field notes.

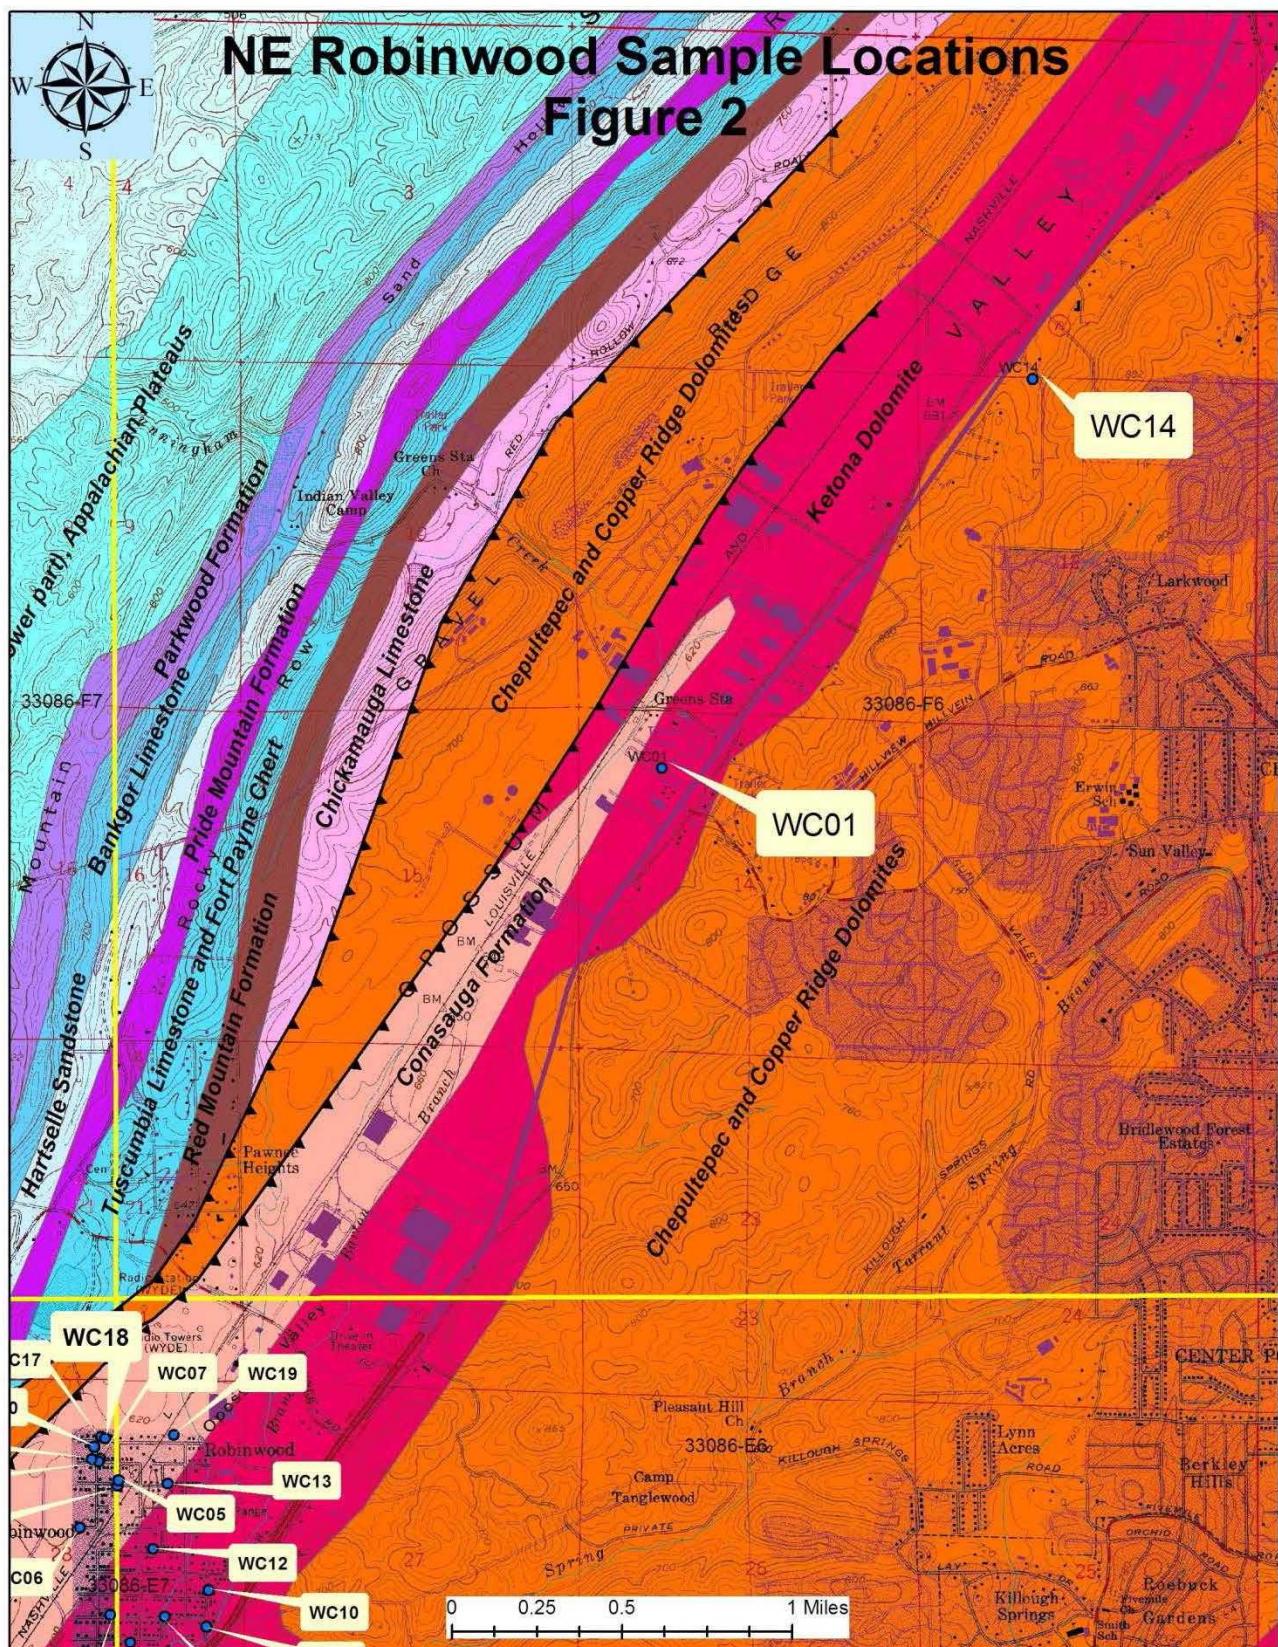

Samples were analyzed at the SESD laboratory in accordance with the Analytical Support Branch (ASB) Laboratory Operations and Quality Assurance Manual, January 2010. The ASB laboratory is accredited by the National Environmental Laboratory Accreditation Conference (NELAC). Analytical methods for the analyses conducted are:

Physical Properties (% Solids), EPA 200.2
Semi Volatile Organic Compounds, EPA 8270D
Total Metals, EPA 200.8. and EPA 6010

Conclusion

The data provided in this report will be used by US EPA Region 4 RCRA Corrective Action to determine an arsenic and BaP TEQ cleanup level for neighborhoods surrounding the Walter Coke facility. Statistical analysis of the data may be required to further refine the cleanup levels. Additional sampling may also be requested.

Appendix A

Analytical Data Sheets

The analytical data sheets were reissued on December 7, 2010 to correct sample times for five samples. No analytical results were affected. See the Report Narrative on page 2 of 105.

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 10-0656, Sloss Industries Corporation
Resource Conservation and Recovery Act

FROM: Sallie Hale
ASB Organic Chemistry Section Chief

THRU: Gary Bennett, Chief
Analytical Support Branch

TO: Kevin Simmons

This data report is being reissued. Some or all of these results were previously reported. Please substitute the corrected results for those results previously reported. Please refer to the Report Narrative for more details.

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at www.epa.gov/region4/sesd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and may have been qualified if the applicable quality control criteria were not met. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Method Used:

Physical Properties (PHYSP)

Physical Properties	EPA 200.2
---------------------	-----------

Semi Volatile Organics (SVOA)

Semivolatile organic compounds	EPA 8270D
--------------------------------	-----------

Total Metals (TMTL)

Total Metals	EPA 200.8
Total Metals	EPA 6010

Project: 10-0656, Sloss Industries Corporation - Reported by Sallie Hale

Report Narrative for Work Order E104001, Project: 10-0656

12/06/10 SJH All Analyses: Sampling times corrected at the Project Leader's request for WC03-SB, WC11-SF, WC11-SF#60, WC14-SF and WC14-SF#60. Data unchanged.

Sample Disposal Policy

Because of the laboratory's limited space for long term sample storage, our policy is to dispose of samples on a periodic schedule. Please note that within 60 days of this memo, the original samples and all sample extracts and/or sample digestates will be disposed of in accordance with applicable regulations. The 60-day sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time if you have a special project need. If you wish for the laboratory to hold samples beyond the 60-day period, please contact our Sample Control Coordinator, Debbie Colquitt, by e-mail at Colquitt.Debbie@epa.gov, and provide a reason for holding samples beyond 60 days

DATA QUALIFIER DEFINITIONS

- U The analyte was not detected at or above the reporting limit.
- D-2 Due to Matrix Interference, the sample cannot be accurately quantified. The reported result is qualitative.
- D-4 MRL elevated due to interferences.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- OM-1 Matrix Spike Recovery less than method control limits
- OM-2 Matrix Spike Recovery greater than method control limits
- OM-3 Matrix Spike Precision outside method control limits

ACRONYMS AND ABBREVIATIONS

CAS	Chemical Abstracts Service Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
MDL	Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
MRL	Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
TIC	Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.
